Installation and setup

Install R program

Download the latest version of R program from http://cran.at.r-project.org/bin/windows/base/release.htm and install on your computer.

Install JUICE program

Installation files of the JUICE program can be downloaded from http://www.sci.muni.cz/botany/juice/?idm=3. If you have already installed the JUICE program on your computer, you may want to update it (in JUICE menu go to Help > Quick JUICE update).

Setup of JUICE program

First step to use the JUICE-R function is to link JUICE and R program by setting up the R directory in JUICE program. Start JUICE program, and in menu **File > Options > External Program Paths > R project** specify the address of Rgui.exe file[1)]. This file is usually in `c:\Program Files\R\R-x.xx.x\bin\x64` folder (if you run 64-bit version of R) or in `c:\Program Files\R\R-x.xx.xx\bin\i386\` folder (if you run 32-bit version of R). `R-x.xx.xx` is the R version you are currently using (e.g. R-3.0.2).

1)
only Rgui.exe works, R.exe or Rterm.exe doesn't!
