In January 2015 this website has been moved (and old pages are automatically redirected) from http://www.sci.muni.cz/botany/zeleny/wiki/juice-r to http://davidzeleny.net/juice-r !

Available R scripts

Name of the script	Brief description	Author
Header data analysis	Draws histograms, regressions and boxplots of JUICE header data	David Zelený
Calculation of generalists and specialists	Calculates co-occurrence based metric of generalists and specialists (Fridley et al. 2007, Zelený 2009)	David Zelený
Species response curves	Calculates and draws species response curves (Gaussian, GLM, GAM and HOF models)	David Zelený
Modified permutation test for Ellenberg values	Calculates modified permutation tests for correlation, regression and ANOVA of mean Ellenberg indicator values with other variables related to species composition, such as ordination scores or results of classification (Zelený & Schaffers 2012)	David Zelený

Download and use the scripts

Download the *.r file with the script and save it in your computer (e.g. in a subfolder of JUICE folder in Program Files, c:/Program Files/JUICE/JUICE-R). Read How to use JUICE-R function for details.

Add a new script

To add the new script, read How to edit this wiki for details.
