How to add the remote github origin to Rstudio package project

1. Create new project (New Directory > R Package > name the package) and click also “Create git repository”
2. This will build the package skeleton in appropriate subfolders (man, R)
3. Now you need to create remote origin: open shell, and type:

   ```
   git remote add origin https://github.com/USERNAME/PACKAGE.git
   ```

   (this will add the origin to the RStudio options - Tools > Project options > Git/SVN)

4. Choose what to commit (e.g. everything:)

   ```
   git add .
   ```

5. Make the initial commit:

   ```
   git commit -m "initial commit"
   ```

6. Establish this repository in GitHub
7. Push the commit:

   ```
   git push -u origin master
   ```
