Error message: Remote Desktop Licensing mode is not configured

Solution: http://larslohmann.blogspot.tw/2015/12/licensing-grace-period.html

1/8/2017 - the process described in the link did not work - the permission cannot be changed. After clicking on Permission link, I needed to click on Advanced to get to “Advanced Security Settings for GracePeriod”, here in the top in the row with Owner I need to click on Change, and in Enter the object name to select I typed zeleny, clicked on Check Names, and then clicked Ok. After that I can change the permission (Full control) and delete the GracePeriod folder. After restarting the computer showed blue hell (Your PC run into a problem), but after another restart everything works ok.
